

ACTIVEMOVE

THE TRANSPORTABLE VIRTUAL REALITY SYSTEM

STEP INTO A VIRTUAL WORLD WITH **ACTIVEMOVE**

Virtalis believes that advanced visualisation and VR's significant benefits are the key to optimising all working practices. That's why we developed **ACTIVEMOVE**, a transportable, interactive 3D visualisation system that is setting the industry benchmark for both price and performance.

ACTIVEMOVE combines best in class technology and is part of the Virtalis ACTIVEWORKS family of 3D immersive visualisation solutions. **ACTIVEMOVE** can't be beaten for those users looking for a cost effective and transportable solution that can be quickly assembled for department presentations, marketing seminars, exhibitions and trade shows, training workshops or research programmes.

ACTIVEMOVE provides a wholly immersive and interactive environment in which to better explore and understand information and data. Immersive environments stimulate intra and inter-disciplinary communications, facilitating a level of understanding often unattainable using conventional methods. Our clients repeatedly tell us that the improved understanding our systems bring is truly transformational to their design reviews, manufacturing processes and marketing efforts.

"Our stereo 3D presentations are always the star turn. Our stand has a real buzz and we find potential customers have found us both memorable and impressive. I believe too that our brand has been enhanced by being linked with something as eye-catching and innovative as Virtual Reality!"

Roger Critchley, marketing director, AREVA Power Electronics Business.

ACTIVEMOVE

INSPIRE, INVENT AND INNOVATE WITH VIRTUALIS TECHNOLOGY

With **ACTIVEMOVE**, data can not only be visualised in stereoscopic 3D, but also the system enables full immersion and interaction, thanks to Virtualis' integrated head and hand tracking solution. This added functionality alters the perspective of the visuals according to the user's position and orientation within the scene. The hand held controller allows the immersive experience to be enhanced further – the user can navigate through the virtual world, pick and manipulate component parts in real time and make decisions on the fly.

“Although the National Grid invested in Virtualis technology initially for training, it is now broadening its use of VR to the entire product lifecycle management”

John Tyler
National Grid's transmission
technical training manager.

ACTIVEMOVE comprises a high brightness, high frame rate, active, stereoscopic 3D three chip DLP projector with a rear projection screen in a dedicated enclosure, coupled with a PC, eyewear, head and hand tracking, installation and support. The system's size, shape and resolution are flexible and scalable. **ACTIVEMOVE** is transported in two custom, wheeled cases specifically designed for local and international shipping, making it easy to share between locations.

Our **ACTIVEMOVE** visualisation systems form the technological core of our advanced visualisation installations and stereoscopic 3D display systems. Virtualis software and services bring subtlety to models and animations, as well as supporting CAD software for real-time interactive and collaborative design reviews, even offering high-resolution digital stereo movie playback at very high bandwidth.

BENEFITS:

- Affordable Virtual Reality
- Professional quality
- Transportable system
- Fully tracked
- Immersive and interactive
- Virtualis experience and support

A RANGE OF:

- Projector specifications
- Screen sizes
- Tracking technologies

SENSE, EXPLORE, UNDERSTAND

Virtualis is a world leading Virtual Reality (VR) and advanced visualisation company. Our systems and solutions give you the chance to really understand your information and your data, to interact with it and to foster communication. Whatever your industry or role, we can prove that advanced visualisation, simulation and VR offer a valuable return on investment. We will arm you with an essential set of tools to improve your competitive position, make your life more efficient and reduce your risk.
